

Consultancy is it worth it?

Why is it that when companies move forward meetings are held in decisions are made to do with accounts marketing staff and many other critical business processes yet in today's business world the backbone of the office is a computer system or network.

Surely it would make sense that companies that are expanding have an idea as to how vital resources are going to expand with them and to have the knowledge that their productivity and resources will meet their needs both now and in the future.

Companies plan their marketing, the plan and develop their products and services, they even produced intricate budgets. But a vast majority of companies fail to plan will have little or no knowledge of where their IT system is going?

This is where consultancy comes in;

How would your company survive catastrophic data loss?

Is our present system restricting us in any way?

At our current growth rate do we have a system that can cope with the changes that are to be made?

Thats why the PC office are currently developing new systems that work hard at allowing you to work smarter.
